12	CS2H	H: Chipselect right, high active	24	C	LED -

### CONTRAST

can be adjusted via external potentiometer. Once contrast is set to an optimum, internal temperature compensation

circuit provides best contrast allover the whole temperature range of -20..+70°C.

### BACKLIGHT

Graphic displays EA DIP128-6 are featured with a white low-power LED-backlight. Life time is min. 50,000 hrs., half of brightness is reached after 30,000 hrs. (@85mA). Brightness can be adjusted infinitely.

Driving the LED backlight requires an external series resistor for current limiting. Calculation is  $R=U/I$ . Result for 5V power supply is between 12 Ohms (120mA) and 85 Ohms (20mA).

e.g.  $I_{typ} = 85mA$ , that means  $R=(5.0V-3.6V)/0.085A= 16\text{ Ohms}$

**Attention:** Do never drive backlight direct to 5V; this may cause immediately defect !

**Note:** Blue-white version provide no contrast when backlight is switched off. Reading the display requires a minimum of backlight with about >10mA.

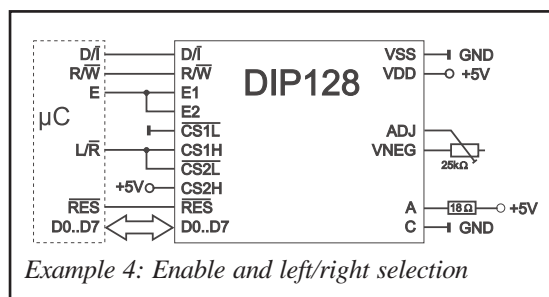

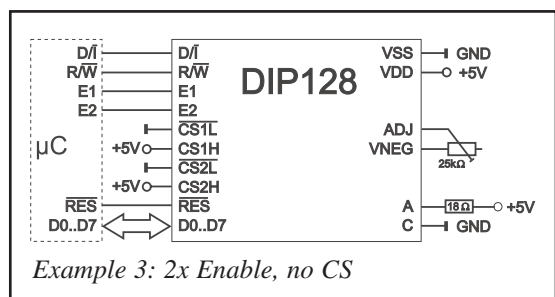

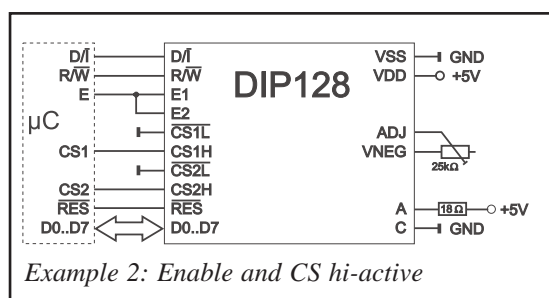

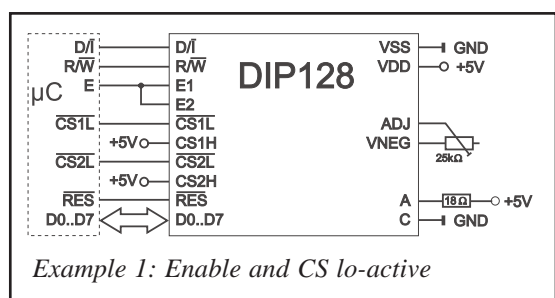

### EA DIP128-6N5LW BLUE-WHITE

### EA DIP128J-6N5LW BLACK-WHITE

Blue-white display EA DIP128-6N5LW is best for indoor use with and without ambient light. Reading the display requires a minimum of backlight with about >10mA.

Black and white version EA DIP128J-6N5LW is especially designed for outdoor applications. This display provides best contrast for all ambient illuminations, even with direct sunlight. No need to say that display can be read in darkness when LED backlight is switched on.
